

## #19825 – Precision Centering Adapter

# Precision 3-inch to 2-inch Adapter

---

*OPTEC-3000 to 2-inch Receiver for cameras and eyepieces.*

### Introduction

With a unique internal tapered clamp design, the #19825 Precision 3" to 2" adapter fits any OPTEC-3000 drawtube and will accept any 2-inch eyepiece or nosepiece. The Precision Centering Adapter is especially good for accurate centering of laser collimators.

### Compatibility:

The OPTEC-3000 dovetail will fit most Optec 3-inch devices including:

- TCF-S3
- TCF-Lynx3
- TCF-LSI 3-inch
- TCF-Leo
- Hercules focusing rotator
- Perseus 3-inch port with #17880 adapter.

### Usage:

The large 3-inch dovetail should be secured tightly in the focuser drawtube. Loosen the lobed top cap of the Precision Centering Adapter to allow the brass insert to expand sufficiently for insertion of your 2-inch eyepiece or camera nosepiece. Tighten by rotating the lobed cap approximately ½ turn to fully secure the eyepiece/nosepiece.

### Note:

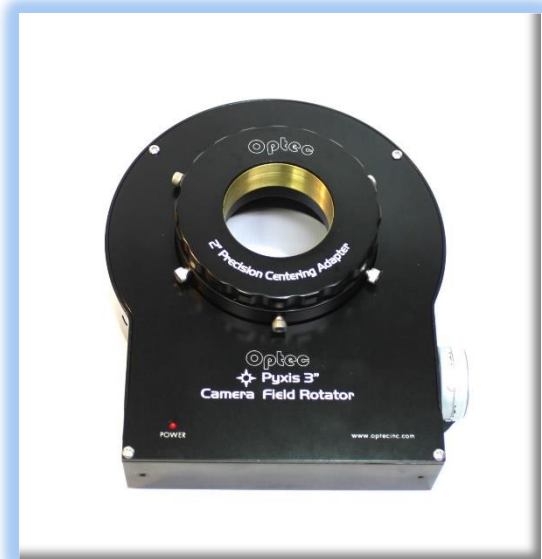

For extra security, a 6-32 threaded hole is present at the edge of the lobed cap. Tighten the included ½" long socket cap screw in the 6-32 hole and then use the socket cap screw for additional leverage.
